

GENERAL INFORMATIONS ON MATERIAL ZINC

Zinc or the zinc alloys designated as Zamak can be individually cast and formed by the zinc die-casting procedure. Specifically these characteristics make zinc the perfect material for our products with outstanding forms and high design claims.

GRIFFWERK door handle units of die-cast zinc permit free development of forms. After the final polish, the zinc die-cast units receive their final finish and are refined. Glossy chrome or matte - there are many options.

CARE INSTRUCTION GRIFFWERK

We recommend regular cleaning with a soft rag and water for care of your handle units on zinc-basis. Observe that surface contaminants are removed from the unit directly and gently
